CHATCO Sprint Backlog: Web and Mobile

This revision retains the original 13 sprints, 65 story IDs, date ranges and Table 2.1-2.13 numbering. Web and mobile implementation work is grouped under the same features rather than creating additional sprints.

Platforms: Administrator Web, Conductor Web, Conductor Android App, Commuter Web and Commuter Android App. There is no Admin mobile app. All clients share the Laravel backend and authoritative account, assignment, shift and transaction records.

Status: Completed is retained for all stories and platform work per the project team's confirmation; this backlog is not an independent production-test certificate. Original dates remain the project schedule record. GCash means the existing sandbox/simulation implementation, not a newly enabled live-payment service.

Sprint 1: Administrator Landing

Schedule: June 15 - 21 | **Status:** Completed

Establish secure Administrator Web access and a concise view of fleet and fare operations. The dashboard reflects the same server records used by conductor and commuter web and mobile clients.

Table 2.1. Sprint 1: Administrator Landing

ID 1	**I want to be able to log in to the system so that I can do my tasks as intended.**	Completed
Feature Type: User Authentication | **Priority:** Must		
Requisite: N/A | **Module:** Login Page		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Implement Administrator Web login, role-based routing and logout-safe session guards.		
Mobile integration: No Admin mobile app. Keep admin access unavailable to commuter and conductor mobile accounts.		
Acceptance Criteria (Functional Requirements):		
1. The user shall be able to access the login page.		Completed
2. The user shall be able to log in using Administrator credentials registered within the system.		Completed
3. The user shall be able to log in and proceed with the dashboard as the administrator.		Completed
4. The system shall deny access to administrator pages for accounts that do not have the administrator role.		Completed
5. Only accounts with the Admin role shall access Administrator Web; no Admin mobile application is introduced.		Completed

ID 2	**I want to be able to view the dashboard with a concise and comprehensive layout so that I can have an overview of the system's operations.**	Completed
Feature Type: User Dashboard | **Priority:** Must		
Requisite: ID #1 | **Module:** Dashboard		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Build the dashboard layout and grouped Operations, Management and System navigation.		
Mobile integration: No Admin mobile app. Use shared operational records so mobile activity is reflected in this web dashboard.		
Acceptance Criteria (Functional Requirements):		
1. The user shall be able to access the dashboard.		Completed
2. The user shall be able to access and view the navigation menu, grouped into Operations, Management, and System, upon logging in.		Completed

ID 3	**I want to be able to view summaries of the day's rides, revenue, active vehicles, and pending remittances in the dashboard so that I can monitor fleet and fare activities.**	Completed
Feature Type: User Dashboard | **Priority:** Must		
Requisite: ID #1, #2 | **Module:** Dashboard		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Display daily ride, revenue, active-unit and pending-remittance summaries with quick links.		
Mobile integration: Include eligible mobile-origin records in the same summaries without counting retries or synchronized cash twice.		
Acceptance Criteria (Functional Requirements):		
1. The administrator dashboard shall display the total rides and total revenue for the current day.		Completed
2. The administrator dashboard shall display the number of active vehicles and pending remittances.		Completed
3. The administrator dashboard shall display recent users, vehicles, announcements, and lost and found items for quick access.		Completed
4. Summaries shall include valid web/mobile transactions once and derive pending counts from unresolved obligations.		Completed

ID 4	**I want to be able to view the live location of units on the dashboard so that I can see the fleet status straight away without navigating anywhere else in the system.**	Completed
Feature Type: User Dashboard | **Priority:** Should		
Requisite: ID #1, #2 | **Module:** Dashboard		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Render the dashboard fleet map and refresh current authorized shift locations.		
Mobile integration: Consume valid GPS updates from either conductor client; distinguish fresh, stale and ended-shift locations.		
Acceptance Criteria (Functional Requirements):		
1. The dashboard shall display a map showing the current location of units on shift.		Completed
2. The map shall update as conductors send new location data.		Completed
3. The dashboard shall use current-shift location/freshness rules for updates from either conductor platform.		Completed

ID 5	**I want to be able to log out of the system so that no one else can use my account on the same device.**	Completed
Feature Type: User Authentication | **Priority:** Should		
Requisite: ID #1 | **Module:** Dashboard		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Expose Administrator Web logout, end the session and redirect to login.		
Mobile integration: No Admin mobile app or mobile administrator logout screen is introduced.		
Acceptance Criteria (Functional Requirements):		
1. The administrator shall be able to log out from the navigation menu.		Completed
2. The system shall end the administrator's session upon logging out.		Completed
3. The system shall redirect the administrator to the login page after logging out.		Completed

Sprint 2: Administrator User and Registration Management

Schedule: June 26 - July 15 | **Status:** Completed

Manage commuter registrations, conductor accounts and access restrictions in Administrator Web. A single account identity and approval status apply to the corresponding web and mobile applications.

Table 2.2. Sprint 2: Administrator User and Registration Management

ID 6	**I want to be able to view the list of accounts registered in the system so that I can manage commuters, conductors, and administrators in one place.**	Completed
Feature Type: User Management | **Priority:** Must		
Requisite: ID #1 | **Module:** User Management		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Build role/status tabs, account listing and search in Administrator Web.		
Mobile integration: Treat a mobile registration as the same commuter account rather than a second platform-specific user.		
Acceptance Criteria (Functional Requirements):		
1. The user management page shall be accessible to the administrator.		Completed
2. The page shall load and display the existing accounts upon navigation to the page.		Completed
3. The page shall separate the accounts into tabs by role and account status.		Completed
4. The administrator shall be able to search for accounts.		Completed
5. An account created from mobile shall appear in the same administrator account list.		Completed

ID 7	**I want to be able to review commuter registrations so that only verified commuters can use the system.**	Completed
Feature Type: User Management | **Priority:** Must		
Requisite: ID #1, #6 | **Module:** User Management		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Show pending registrations, private ID viewing and approve/reject actions with emailed outcomes.		
Mobile integration: Submit registration and proof from Commuter Mobile; display the same pending, approved or rejected backend result.		
Acceptance Criteria (Functional Requirements):		
1. The system shall list the commuter registrations that are pending approval.		Completed
2. The administrator shall be able to view the valid ID submitted by each applicant.		Completed
3. The administrator shall be able to approve a registration, allowing the commuter to log in.		Completed
4. The administrator shall be able to reject a registration with a reason.		Completed
5. The system shall notify the commuter through email once the registration is approved or rejected.		Completed
6. Web and mobile submissions shall use the same approval decision and private identity-document policy.		Completed

ID 8	**I want to be able to create accounts for conductors so that they can access the system and perform their shift duties.**	Completed
Feature Type: User Management | **Priority:** Must		
Requisite: ID #1, #6 | **Module:** User Management, Add Conductor Form		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Create conductor accounts and issue their login credentials through Administrator Web.		
Mobile integration: Authenticate Conductor Mobile with the same issued account and enforce conductor-only access.		
Acceptance Criteria (Functional Requirements):		
1. The system shall allow the administrator to create conductor accounts.		Completed
2. The system shall generate the log-in credentials of each new conductor account.		Completed
3. Conductor accounts shall only have access to the features relevant to the conductor role.		Completed
4. The same conductor credentials shall be usable on the supported conductor clients, subject to session policy.		Completed

ID 9	**I want to be able to register commuters on-site so that commuters who register at the terminal can still be verified.**	Completed
Feature Type: User Management | **Priority:** Should		
Requisite: ID #1, #7 | **Module:** Onsite Registration Form		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Provide the on-site registration form, private ID upload and approval workflow.		
Mobile integration: Allow the approved commuter to recover a password and sign in on mobile using that same account.		
Acceptance Criteria (Functional Requirements):		
1. The administrator shall be able to fill out the registration form and upload the valid ID on the commuter's behalf.		Completed
2. The system shall add the on-site registration to the pending registrations for approval.		Completed
3. The commuter shall be able to set their own password through password recovery once the account is approved.		Completed
4. The approved on-site account shall be usable through both supported commuter clients.		Completed

ID 10	**I want to be able to update, suspend, or disable accounts so that account details stay accurate and problematic accounts cannot access the system.**	Completed
Feature Type: User Management | **Priority:** Must		
Requisite: ID #1, #6 | **Module:** User Management		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Provide permitted account edits, suspension, conductor disabling and credential reset controls.		
Mobile integration: Handle revoked/disabled sessions and refresh account state on mobile; do not trust cached access flags.		
Acceptance Criteria (Functional Requirements):		
1. The administrator shall be able to update permitted account/profile fields without bypassing verified-identity restrictions.		Completed
2. The administrator shall be able to suspend a commuter account, blocking its authenticated use.		Completed
3. The administrator shall be able to disable a conductor account and reset its credentials.		Completed
4. The system shall invalidate affected active sessions according to the account restriction and session policy.		Completed

Sprint 3: Administrator Fleet Management

Schedule: June 24 - July 8 | **Status:** Completed

Maintain vehicle and personnel records and operational assignments in Administrator Web. Conductor Web and Conductor Mobile consume these shared records instead of creating separate fleets.

Table 2.3. Sprint 3: Administrator Fleet Management

ID 11	**I want to be able to view the list of units and personnel so that I know which vehicles, drivers, and conductors are in the fleet.**	Completed
Feature Type: Fleet Management | **Priority:** Must		
Requisite: ID #1 | **Module:** Fleet Management		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: List vehicles, drivers, conductors and their current assignment/operational status.		
Mobile integration: Display the conductor current assignment from these same server-owned fleet records.		
Acceptance Criteria (Functional Requirements):		
1. The fleet management page shall be accessible to the administrator.		Completed
2. The page shall load and display the existing vehicles, drivers, and conductors upon navigation to the page.		Completed
3. The page shall display the status and the assigned crew of each unit.		Completed
4. Current assignment information shall agree with the conductor web/mobile assignment response.		Completed

ID 12	**I want to be able to add and update vehicles so that the fleet records match the units in operation.**	Completed
Feature Type: Fleet Management | **Priority:** Must		
Requisite: ID #1, #11 | **Module:** Add Vehicle Form		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Validate and maintain unit number, plate number, route and other supported vehicle details.		
Mobile integration: Read vehicle and route details through the conductor API without maintaining a separate mobile vehicle catalog.		
Acceptance Criteria (Functional Requirements):		
1. The system shall allow the administrator to add a vehicle with its plate number, unit number, and route.		Completed
2. The system shall allow the administrator to update the details of a vehicle.		Completed
3. The system shall validate the vehicle details and display an error for invalid entries.		Completed
4. Published vehicle/route changes shall be exposed consistently to their eligible mobile consumers.		Completed

ID 13	**I want to be able to add and update driver records so that each unit has a recorded, licensed driver.**	Completed
Feature Type: Fleet Management | **Priority:** Must		
Requisite: ID #1, #11 | **Module:** Add Driver Form		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Maintain licensed driver records and personnel profiles in Administrator Web.		
Mobile integration: Display the driver tied to the conductor operational assignment; drivers remain fleet records, not a new mobile account role.		
Acceptance Criteria (Functional Requirements):		
1. The system shall allow the administrator to add drivers with their license number.		Completed
2. The system shall allow the administrator to update the information of a driver.		Completed
3. The administrator shall be able to view the profile of each driver and conductor.		Completed
4. The assigned driver shall be identifiable in shift records generated by either conductor client.		Completed

ID 14	**I want to be able to assign a driver and a conductor to a unit so that each shift runs with the right crew.**	Completed
Feature Type: Fleet Management | **Priority:** Must		
Requisite: ID #8, #12, #13 | **Module:** Fleet Management		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Assign and approve the unit/driver/conductor combination and restrict unsafe active-shift crew changes.		
Mobile integration: Retrieve and verify the approved assignment in Conductor Mobile; the mobile interface does not approve its own assignment.		
Acceptance Criteria (Functional Requirements):		
1. The administrator shall be able to assign a driver and a conductor to a unit.		Completed
2. The system shall prevent crew changes while the unit has an active shift.		Completed
3. The fleet management page shall display the crew currently on duty for each unit.		Completed
4. The backend shall enforce the authorized assignment rather than trusting mobile/web selection state.		Completed

ID 15	**I want to be able to view the details and history of each unit so that I can trace its past shifts and personnel.**	Completed
Feature Type: Fleet Management | **Priority:** Should		
Requisite: ID #11 | **Module:** Vehicle Details		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Show vehicle details, permanent unit QR, shift history and terminated-personnel records.		
Mobile integration: Use the same vehicle and shift identifiers in mobile operations so their historical activity remains traceable.		
Acceptance Criteria (Functional Requirements):		
1. The administrator shall be able to open the details of a vehicle, including its permanent unit QR code.		Completed
2. The system shall display the shift history of each unit.		Completed
3. The system shall keep a record of terminated personnel.		Completed
4. Web/mobile activity shall retain the historical vehicle and shift associations used by reports.		Completed

Sprint 4: Administrator Monitoring and Safety

Schedule: June 24 - July 18 | **Status:** Completed

Monitor authorized operating units and respond to safety concerns in Administrator Web. GPS and SOS data from both web and mobile clients feed the same monitoring and incident history.

Table 2.4. Sprint 4: Administrator Monitoring and Safety

ID 16	**I want to be able to monitor the live location of units on shift so that I can track fleet operations in real time.**	Completed
Feature Type: Live Monitoring | **Priority:** Must		
Requisite: ID #1 | **Module:** Monitoring		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Display current unit locations, freshness indicators and focused-unit tracking on the monitoring map.		
Mobile integration: Accept current-shift GPS from Conductor Mobile and expose the same valid locations to commuter tracking.		
Acceptance Criteria (Functional Requirements):		
1. The monitoring page shall be accessible to the administrator.		Completed
2. The page shall display all units currently on shift on a live map.		Completed
3. The page shall flag units that have stopped sending location updates.		Completed
4. The administrator shall be able to select a unit to focus on its location.		Completed
5. Freshness, shift matching and operational visibility shall apply equally to web/mobile GPS producers.		Completed

ID 17	**I want to be notified when a unit is overspeeding so that I can act on unsafe driving.**	Completed
Feature Type: Safety Management | **Priority:** Must		
Requisite: ID #16 | **Module:** Monitoring		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Display backend overspeed alerts and historical records using the configured threshold.		
Mobile integration: Send valid speed/location samples from the active conductor shift; do not create a separate mobile speeding history.		
Acceptance Criteria (Functional Requirements):		
1. The system shall detect when a unit exceeds the speed limit set in the operations rules.		Completed
2. The system shall alert the administrator of overspeeding units.		Completed
3. The system shall keep a history of overspeeding incidents for review.		Completed
4. Speeding records shall belong to the originating shift and survive operational assignment resets.		Completed

ID 18	**I want to be able to receive and respond to SOS alerts so that commuters in danger get help quickly.**	Completed
Feature Type: Safety Management | **Priority:** Must		
Requisite: ID #1 | **Module:** Monitoring, SOS Alerts		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Receive, acknowledge and resolve SOS alerts and preserve incident history.		
Mobile integration: Send account-owned SOS alerts with actual permitted location from Commuter Mobile and reflect the same incident status.		
Acceptance Criteria (Functional Requirements):		
1. The system shall notify the administrator immediately when a commuter triggers an SOS alert.		Completed
2. The alert shall show the details and location of the commuter.		Completed
3. The administrator shall be able to acknowledge and resolve an SOS alert.		Completed
4. The system shall keep a history of SOS alerts.		Completed
5. Alerts sent from either commuter client shall appear in the same administrator SOS workflow.		Completed

Sprint 5: Administrator Financial Management

Schedule: June 23 - July 19 | **Status:** Completed

Reconcile recorded collections, manage remittance and maintain approved fares in Administrator Web. Financial calculations and transaction identities remain shared across web and mobile.

Table 2.5. Sprint 5: Administrator Financial Management

ID 19	**I want to view and process conductor remittances so that expected physical cash and recorded digital collections are reconciled correctly.**	Completed
Feature Type: Financial Management | **Priority:** Must		
Requisite: ID #1 | **Module:** Remittance		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: List pending/completed remittances, expected physical cash and separately represented GCash totals.		
Mobile integration: Record mobile fares under their originating shift; conductors can see unresolved obligations but Admin records actual cash remittance.		
Acceptance Criteria (Functional Requirements):		
1. The remittance page shall be accessible only to the administrator.		Completed
2. The page shall show expected physical cash separately from recorded GCash/simulation totals for each shift.		Completed
3. Pending remittances shall remain distinct from completed remittances; ending a shift shall not mark physical cash as handed over.		Completed
4. The administrator shall be able to filter the remittance history.		Completed

ID 20	**I want to review shift collections and record the cash actually received so that remittance is completed only after the physical handover.**	Completed
Feature Type: Financial Management | **Priority:** Must		
Requisite: ID #19 | **Module:** Remittance Details		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Display authoritative paid transactions and record actual cash handed over through the Admin remittance workflow.		
Mobile integration: Ensure synchronized mobile cash and valid digital payments contribute to the correct shift without duplicating passengers or receipts.		
Acceptance Criteria (Functional Requirements):		
1. The administrator shall be able to open a shift remittance and view its authoritative paid transactions.		Completed
2. The system shall calculate expected cash from valid cash collections and show digital/voucher amounts separately.		Completed
3. The administrator shall record the actual cash received and complete the obligation through the Admin workflow.		Completed
4. Any shortage shall be calculated as expected cash minus actual cash received, without creating another remittance for the same shift.		Completed

ID 21	**I want to be able to view fare receipts so that I have a record of every payment made in the system.**	Completed
Feature Type: Financial Management | **Priority:** Must		
Requisite: ID #1 | **Module:** Receipts		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Provide searchable/filterable transaction receipts with payment method, date and status.		
Mobile integration: Expose the same mobile-origin transaction/reference and receipt information in Admin Web and commuter history where eligible.		
Acceptance Criteria (Functional Requirements):		
1. The receipts page shall be accessible to the administrator.		Completed
2. The page shall display fare transactions with their payment method and status.		Completed
3. The administrator shall be able to filter the receipts by date.		Completed
4. A valid mobile-origin payment shall resolve to the same authoritative receipt/reference in the relevant clients.		Completed

ID 22	**I want to be able to manage the fare matrix so that fares charged to commuters follow the approved rates.**	Completed
Feature Type: Financial Management | **Priority:** Must		
Requisite: ID #1 | **Module:** Fare Matrix		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Manage and publish fare points and the server-authoritative fare matrix.		
Mobile integration: Load the published fare matrix in both mobile applications and revalidate submitted fares on the backend.		
Acceptance Criteria (Functional Requirements):		
1. The fare matrix page shall be accessible to the administrator.		Completed
2. The administrator shall be able to add, update, and remove fare points.		Completed
3. The system shall use the saved fare matrix when computing fares for commuters and conductors.		Completed
4. Mobile fare previews and payment requests shall be checked against the same saved backend fare rules.		Completed

ID 23	**I want to be able to set the commuter discount rates so that student, senior citizen, and PWD fares are computed correctly.**	Completed
Feature Type: Financial Management | **Priority:** Should		
Requisite: ID #22 | **Module:** Financial Rules		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Maintain supported discount settings and apply them in shared backend fare calculations.		
Mobile integration: Use registered commuter eligibility and the same fare/rounding rules on mobile; client previews do not override backend totals.		
Acceptance Criteria (Functional Requirements):		
1. The administrator shall be able to set the discount rates for students, senior citizens, and PWDs.		Completed
2. The system shall apply the saved discount rates when computing fares.		Completed
3. Registered eligibility shall be enforced by the backend for both web and mobile requests.		Completed

Sprint 6: Administrator Lost and Found, Announcements, and Rewards

Schedule: June 28 - July 14 | **Status:** Completed

Manage found items, claims, announcements and vouchers in Administrator Web. Commuter Web and Commuter Mobile display and act on the same published records and account-owned rewards.

Table 2.6. Sprint 6: Administrator Lost and Found, Announcements, and Rewards

ID 24	**I want to be able to record items left in units so that their owners can find and claim them.**	Completed
Feature Type: Lost and Found | **Priority:** Must		
Requisite: ID #1 | **Module:** Lost and Found		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Record found-item descriptions, unit association, photos and supported status changes.		
Mobile integration: Show the same published item records in Commuter Mobile; no mobile administrator recording interface is added.		
Acceptance Criteria (Functional Requirements):		
1. The lost and found page shall be accessible to the administrator.		Completed
2. The administrator shall be able to record a found item with its description, unit, and photo.		Completed
3. The administrator shall be able to update and close item records.		Completed
4. The same published item status/photo shall be available to eligible commuter web/mobile viewers.		Completed

ID 25	**I want to be able to review claims for found items so that items are released only to their rightful owners.**	Completed
Feature Type: Lost and Found | **Priority:** Must		
Requisite: ID #24 | **Module:** Lost and Found		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Review claims, approve/reject them and record release through Administrator Web.		
Mobile integration: Submit account-owned mobile claims and refresh their shared review/release status.		
Acceptance Criteria (Functional Requirements):		
1. The system shall list the claims submitted for each item.		Completed
2. The administrator shall be able to approve or reject a claim.		Completed
3. The administrator shall be able to mark an item as released once it is claimed.		Completed
4. A claim created through mobile shall appear in the same administrator review queue.		Completed

ID 26	**I want to be able to post announcements so that commuters are informed of service updates.**	Completed
Feature Type: Announcements | **Priority:** Must		
Requisite: ID #1 | **Module:** Announcements		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Create, edit and publish announcements for the configured audiences.		
Mobile integration: Display relevant announcements on commuter/conductor mobile and keep account-level read state consistent.		
Acceptance Criteria (Functional Requirements):		
1. The announcements page shall be accessible to the administrator.		Completed
2. The administrator shall be able to create, update and manage announcements for the supported commuter/conductor audiences.		Completed
3. Eligible clients shall show published announcements and their account-level unread/read state.		Completed

ID 27	**I want to be able to generate vouchers so that I can give discounts and free rides to commuters.**	Completed
Feature Type: Rewards Management | **Priority:** Should		
Requisite: ID #1 | **Module:** Voucher Generator		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Generate supported vouchers and display their valid, used and expired states.		
Mobile integration: Load account-owned vouchers on Commuter Mobile and use backend validation when redeeming them.		
Acceptance Criteria (Functional Requirements):		
1. The administrator shall be able to generate vouchers by type, such as discount and free ride.		Completed
2. The system shall display the status of each voucher as active, used, or expired.		Completed
3. Voucher availability and redemption shall be backend-validated consistently for web and mobile.		Completed

ID 28	**I want to be able to set the number of rides needed to earn a reward so that the loyalty program can be adjusted.**	Completed
Feature Type: Rewards Management | **Priority:** Should		
Requisite: ID #27 | **Module:** Loyalty Program		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Configure reward thresholds and preserve the policy applying changes to subsequent qualifying rides.		
Mobile integration: Display server-calculated reward progress rather than independently awarding rides or reconstructing historical rewards.		
Acceptance Criteria (Functional Requirements):		
1. The administrator shall be able to set the ride threshold for earning a reward voucher.		Completed
2. The system shall apply a new threshold only to rides taken after the change.		Completed
3. Opening a reward screen shall not itself generate historical ride rewards.		Completed

Sprint 7: System Activities

Schedule: July 7 - August 30 | **Status:** Completed

Maintain activity history, analytics and operational configuration through Administrator Web. The shared backend applies authorization, fare, safety and maintenance rules to both client platforms.

Table 2.7. Sprint 7: System Activities

ID 29	**I want to view the activity logs so that I can know the history of each user and the changes that happened within the system.**	Completed
Feature Type: System Activities | **Priority:** Must		
Requisite: ID #1 | **Module:** Activity Logs		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Display user activity and supported operational change history in Administrator Web.		
Mobile integration: Record supported mobile-origin account and operational actions in the shared backend activity trail.		
Acceptance Criteria (Functional Requirements):		
1. The activity logs page shall be accessible to the administrator.		Completed
2. The system shall display the history of actions performed by each user within the system.		Completed
3. The system shall show the details of changes made, including what was changed, when, and by whom.		Completed
4. Supported account/operational actions from web and mobile shall be represented in the common audit history.		Completed

ID 30	**I want to filter the activity logs so that I can find specific actions quickly.**	Completed
Feature Type: System Activities | **Priority:** Could		
Requisite: ID #29 | **Module:** Activity Logs		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Provide category/date filters for Administrator Web activity history.		
Mobile integration: Make relevant mobile-origin records discoverable through the same filters; no Admin mobile log screen is created.		
Acceptance Criteria (Functional Requirements):		
1. The system shall allow the administrator to filter the activity logs by category.		Completed
2. The system shall allow the administrator to filter the activity logs by date.		Completed

ID 31	**I want to view the analytics of rides and revenue so that I can see trends and make operational decisions.**	Completed
Feature Type: Analytics | **Priority:** Should		
Requisite: ID #1 | **Module:** Analytics		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Display ride/revenue comparisons, peak activity, pickup demand and voucher analytics.		
Mobile integration: Include eligible mobile transactions in the same aggregates without double-counting replays or offline retries.		
Acceptance Criteria (Functional Requirements):		
1. The analytics page shall display ride and revenue totals for a selected date range.		Completed
2. The page shall compare the selected period with the previous period.		Completed
3. The page shall display the peak hours and a demand map of pickup points.		Completed
4. The page shall display how vouchers were used.		Completed
5. Mobile-origin transactions and later offline synchronization shall not inflate shared analytics through duplicates.		Completed

ID 32	**I want to configure the operations and safety rules so that shifts and alerts follow the operator's policies.**	Completed
Feature Type: System Configuration | **Priority:** Must		
Requisite: ID #1 | **Module:** Operations Rules, Safety Notifications		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Configure safety, shift-duration and remittance-reminder settings through Administrator Web.		
Mobile integration: Read/apply the same backend rules in conductor and commuter mobile flows rather than hardcoding competing policies.		
Acceptance Criteria (Functional Requirements):		
1. The administrator shall be able to set the overspeeding limit.		Completed
2. The administrator shall be able to set the maximum shift duration and the shift closing time.		Completed
3. The administrator shall be able to set the remittance reminder schedule.		Completed
4. Policy changes shall be enforced by shared backend logic, with compatible web/mobile refresh behavior.		Completed

ID 33	**I want to put the system under maintenance so that users are informed when the service is temporarily unavailable.**	Completed
Feature Type: System Configuration | **Priority:** Should		
Requisite: ID #1 | **Module:** App Configuration		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Configure role-scoped maintenance messages and show the web maintenance gate.		
Mobile integration: Handle the backend maintenance response in mobile with a clear unavailable state while preserving account and pending recovery data.		
Acceptance Criteria (Functional Requirements):		
1. The administrator shall be able to turn maintenance mode on or off for supported roles and provide a reason.		Completed
2. The backend shall enforce role-scoped maintenance restrictions; affected web and mobile clients shall display the notice.		Completed

ID 34	**I want to manage the frequently asked questions so that the public site answers common questions accurately.**	Completed
Feature Type: System Configuration | **Priority:** Could		
Requisite: ID #1 | **Module:** FAQ Management		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Maintain FAQ entries/categories and display them in the public web FAQ interface.		
Mobile integration: Keep FAQ content server-managed; mobile help links consume the supported shared content rather than introducing mobile admin settings.		
Acceptance Criteria (Functional Requirements):		
1. The administrator shall be able to add, update, and remove FAQs under categories.		Completed
2. The FAQ chat on the landing page shall display the saved FAQs.		Completed

Sprint 8: Conductor Shift and Fare Activities

Schedule: June 16 - 23 | **Status:** Completed

Implement the conductor shift, live-location, hailing and fare-recording workflows in both Conductor Web and Conductor Mobile. Separate interface work connects to one authorized assignment, shift and transaction lifecycle.

Table 2.8. Sprint 8: Conductor Shift and Fare Activities

ID 35	**I want to be able to log in to the system so that I can do my tasks as intended.**	Completed
Feature Type: User Authentication | **Priority:** Must		
Requisite: ID #8 | **Module:** Login Page		
Platform scope: Conductor Web and Conductor Android App		
Web implementation: Provide conductor login, session validation and navigation to operational verification.		
Mobile implementation: Build native login/session restoration using the mobile auth routes and protected token storage.		
Acceptance Criteria (Functional Requirements):		
1. The user shall be able to access the login page.		Completed
2. The user shall be able to log in using their conductor credentials registered within the system.		Completed
3. The user shall be able to log in and proceed with the unit verification as the conductor.		Completed
4. Conductor Mobile shall restore a saved session safely and reject revoked/unauthorized account access.		Completed

ID 36	**I want to access only the features related to my tasks so that I can focus on my responsibilities.**	Completed
Feature Type: User Authentication | **Priority:** Must		
Requisite: ID #35 | **Module:** Conductor Dashboard		
Platform scope: Conductor Web and Conductor Android App		
Web implementation: Guard conductor pages and route other roles to their permitted web interfaces.		
Mobile implementation: Guard conductor screens and actions using backend role/account state, including restart and session-revocation handling.		
Acceptance Criteria (Functional Requirements):		
1. The conductor shall only be able to access the conductor pages.		Completed
2. The system shall redirect the conductor away from administrator and commuter pages.		Completed
3. Native screen protection shall supplement, not replace, backend role and ownership checks.		Completed

ID 37	**I want to verify my Admin-approved unit and driver before starting a shift so that fares and location are recorded under the authorized assignment.**	Completed
Feature Type: Shift Management | **Priority:** Must		
Requisite: ID #35 | **Module:** Unit Verification		
Platform scope: Conductor Web and Conductor Android App		
Web implementation: Retrieve and verify the Admin-approved unit and driver before starting or restoring a shift.		
Mobile implementation: Build native assignment verification and shift start against the same approved operational assignment and day.		
Acceptance Criteria (Functional Requirements):		
1. The system shall retrieve the unit and driver authorized by the administrator for the conductor current operational assignment.		Completed
2. The backend shall validate assignment ownership, operational-day validity, vehicle and driver before starting the shift.		Completed
3. The conductor shall be able to verify an approved assignment, but shall not create or approve an authoritative assignment from either client.		Completed
4. The system shall show a clear verification/unavailable state when no valid assignment exists.		Completed

ID 38	**I want my unit's location to be shared while I am on shift so that commuters and administrators can track the jeepney.**	Completed
Feature Type: Ride Tracking | **Priority:** Must		
Requisite: ID #37 | **Module:** Conductor Dashboard		
Platform scope: Conductor Web and Conductor Android App		
Web implementation: Request browser location permission and send current-shift GPS updates; show unavailable-location states.		
Mobile implementation: Request native location permission and send timestamped current-shift samples; handle denied permission, disabled GPS and app lifecycle safely.		
Acceptance Criteria (Functional Requirements):		
1. The authorized conductor client shall send valid GPS samples associated with its active shift when location access is available.		Completed
2. Administrator and commuter maps shall receive current eligible unit locations according to the existing operational visibility rules.		Completed
3. The system shall stop treating an ended or previous-shift location as a current operating location.		Completed

ID 39	**I want to receive Pick Me Up requests from nearby commuters so that I can pick them up along the route.**	Completed
Feature Type: Pick Me Up | **Priority:** Must		
Requisite: ID #38 | **Module:** Conductor Dashboard		
Platform scope: Conductor Web and Conductor Android App		
Web implementation: Receive and act on nearby Pick Me Up requests and update terminal states.		
Mobile implementation: Build native hail notifications/list actions using the same request IDs, eligible range and server expiry.		
Acceptance Criteria (Functional Requirements):		
1. The system shall notify the conductor of Pick Me Up requests from commuters within 1 kilometer of the unit.		Completed
2. The conductor shall be able to accept or reject a request.		Completed
3. The system shall expire requests that are not answered within 3 minutes.		Completed
4. Conductor web/mobile actions shall update the same hail, and expiration shall not overwrite a successful transition.		Completed

ID 40	**I want to record each passenger's fare in cash or GCash so that every payment is accounted for.**	Completed
Feature Type: Fare Collection | **Priority:** Must		
Requisite: ID #37 | **Module:** Fare Calculator, Payment		
Platform scope: Conductor Web and Conductor Android App		
Web implementation: Build fare selection, review, cash submission and GCash sandbox initiation/status controls.		
Mobile implementation: Build native fare/payment screens and scanner interactions using the mobile API and the same backend-authoritative totals.		
Acceptance Criteria (Functional Requirements):		
1. The system shall compute the authoritative fare from boarding/drop-off points, approved rates and eligible passenger discounts.		Completed
2. The conductor shall be able to record a cash payment.		Completed
3. The conductor shall be able to initiate the existing GCash sandbox/simulation payment and present its payment QR.		Completed
4. Valid transactions shall remain associated with the correct conductor, vehicle and originating shift.		Completed

ID 41	**I want to end my shift and view my collections so that the operator can review the totals and handle any required cash remittance.**	Completed
Feature Type: Remittance | **Priority:** Must		
Requisite: ID #40 | **Module:** End of Day		
Platform scope: Conductor Web and Conductor Android App		
Web implementation: End the shift, show collection totals and display any resulting pending cash obligation.		
Mobile implementation: Close the same server shift from Conductor Mobile and show its result; Admin, not the conductor app, records physical cash remittance.		
Acceptance Criteria (Functional Requirements):		
1. The conductor shall be able to view the shift cash and GCash/simulation collection totals.		Completed
2. Manual or automatic shift ending shall preserve transaction history and create or preserve the required pending cash obligation.		Completed
3. The administrator shall see and process the obligation; only recording an actual remittance shall mark physical cash received.		Completed
4. Conductor Web and Mobile shall reflect the same ended shift and must not duplicate the closeout or remittance.		Completed

Sprint 9: Conductor Operations Activities

Schedule: July 28 - August 23 | **Status:** Completed

Support group passengers, receipts, breaks, offline cash and device handoff in both conductor clients. Device-local recovery data remains separate from authoritative server shift and payment records.

Table 2.9. Sprint 9: Conductor Operations Activities

ID 42	**I want to record one payment for a group of passengers so that I can serve groups quickly.**	Completed
Feature Type: Fare Collection | **Priority:** Must		
Requisite: ID #40 | **Module:** Payment		
Platform scope: Conductor Web and Conductor Android App		
Web implementation: Collect group role breakdown and initiate one logical cash or GCash group payment.		
Mobile implementation: Build native group selection; include the registered GCash payer once plus entered companions, preserving unique passenger positions.		
Acceptance Criteria (Functional Requirements):		
1. The conductor shall be able to enter a group passenger-role breakdown for cash or GCash/simulation payment.		Completed
2. The backend shall apply each passenger eligible fare/discount and preserve the group reference and individual passenger records where required.		Completed
3. For registered-payer GCash groups, the conductor shall enter companions only and the system shall add the payer exactly once.		Completed
4. Repeated confirmation or synchronization shall not create duplicate group transactions.		Completed

ID 43	**I want to print fare receipts so that passengers have proof of payment.**	Completed
Feature Type: Fare Collection | **Priority:** Should		
Requisite: ID #40 | **Module:** Payment, Receipt		
Platform scope: Conductor Web and Conductor Android App		
Web implementation: Render completed-fare receipts and provide supported automatic/manual browser printing.		
Mobile implementation: Display the authoritative mobile receipt and offer supported share/OS print handoff; physical printing depends on a compatible device/printer.		
Acceptance Criteria (Functional Requirements):		
1. The system shall generate an authoritative receipt when an eligible fare transaction completes.		Completed
2. Conductor Web shall support the configured automatic and manual browser receipt-printing flow.		Completed
3. Conductor Mobile shall display the receipt and provide the supported sharing/OS print handoff; printing requires a compatible device/printer.		Completed
4. Receipt contents shall follow the administrator receipt settings and reference the actual transaction.		Completed

ID 44	**I want to set my unit on break so that the administrator knows the unit is temporarily not in service.**	Completed
Feature Type: Shift Management | **Priority:** Should		
Requisite: ID #37 | **Module:** Conductor Dashboard		
Platform scope: Conductor Web and Conductor Android App		
Web implementation: Provide Take a Break/Resume controls and refresh backend shift/break state.		
Mobile implementation: Provide native break/resume controls for the same shift and prevent actions disallowed during a break.		
Acceptance Criteria (Functional Requirements):		
1. The conductor shall be able to start and end a break during a shift.		Completed
2. The system shall show the break status on the administrator's dashboard and map.		Completed
3. Break/resume shall update the same server shift and follow the intended transaction and map-visibility rules.		Completed

ID 45	**I want to keep recording cash fares when the connection drops so that no payment is lost.**	Completed
Feature Type: Fare Collection | **Priority:** Must		
Requisite: ID #40 | **Module:** Conductor Dashboard		
Platform scope: Conductor Web and Conductor Android App		
Web implementation: Persist cash-only offline entries in browser storage and synchronize with stable idempotency and original shift IDs.		
Mobile implementation: Persist cash-only entries in device storage, recover them after restart and synchronize without overwriting or duplicating queued work.		
Acceptance Criteria (Functional Requirements):		
1. The conductor client shall persist cash fares locally with a stable idempotency key and originating shift/device information when offline.		Completed
2. The client shall synchronize queued fares after reconnection and remove them only after confirmed backend success.		Completed
3. Concurrent queue changes, retries and restart recovery shall not silently lose or duplicate fares.		Completed
4. GCash shall be unavailable offline; cash captured for Shift A shall never silently attach to Shift B.		Completed
5. The client shall warn or prevent shift-end/logout actions that would abandon its known unsynchronized cash queue.		Completed

ID 46	**I want to continue my active shift on another device so that a lost or dead phone does not stop my shift.**	Completed
Feature Type: Shift Management | **Priority:** Should		
Requisite: ID #35, #37 | **Module:** Login Page		
Platform scope: Conductor Web and Conductor Android App		
Web implementation: Restore the authoritative active shift on login and respect server operating-device/session ownership.		
Mobile implementation: Restore or explicitly claim the same shift on the new device without creating a duplicate; preserve unsynchronized cash on its originating device.		
Acceptance Criteria (Functional Requirements):		
1. The system shall retrieve the existing active shift when the conductor logs in on another supported device.		Completed
2. The new client shall follow the existing authenticated session and operating-device ownership policy rather than starting a duplicate shift.		Completed
3. The previous device shall lose operational authority as required by the handoff policy.		Completed
4. Unsynchronized cash shall remain recoverable on its originating device and shall not be assumed to exist on the new device.		Completed

Sprint 10: Commuter Account and Ride Activities

Schedule: June 19 - July 27 | **Status:** Completed

Implement registration, authentication, account recovery, tracking, hailing and profile management in Commuter Web and the Commuter Android application, with shared identity and backend authorization.

Table 2.10. Sprint 10: Commuter Account and Ride Activities

ID 47	**I want to be able to create an account so that I can use the features of the system.**	Completed
Feature Type: User Registration | **Priority:** Must		
Requisite: N/A | **Module:** Sign Up Page		
Platform scope: Commuter Web and Commuter Android App		
Web implementation: Provide registration, valid-ID upload, email code verification and password validation.		
Mobile implementation: Build native forms, agreement capture and document/image selection against mobile registration routes and the same approval workflow.		
Acceptance Criteria (Functional Requirements):		
1. The commuter shall be able to access the sign-up page.		Completed
2. The commuter shall be able to fill out their personal details and upload a photo of a valid ID.		Completed
3. The system shall verify the commuter's email address with a code.		Completed
4. The system shall require a strong password.		Completed
5. The account shall remain pending until it is approved by the administrator.		Completed
6. Mobile photo/document selection, validation and errors shall preserve the same account-registration contract as web.		Completed

ID 48	**I want to be able to log in to the system so that I can use the features of the system.**	Completed
Feature Type: User Authentication | **Priority:** Must		
Requisite: ID #7, #47 | **Module:** Login Page		
Platform scope: Commuter Web and Commuter Android App		
Web implementation: Provide username/email login, role routing and account-status errors.		
Mobile implementation: Restore the native session securely, validate it with the backend and handle pending, suspended or revoked account access.		
Acceptance Criteria (Functional Requirements):		
1. The user shall be able to access the login page.		Completed
2. The user shall be able to log in using their username or email and password.		Completed
3. The system shall prevent pending, rejected, and suspended accounts from logging in.		Completed
4. The user shall be able to log in and proceed with the dashboard as the commuter.		Completed
5. Web and mobile shall identify the same commuter account; client storage shall not establish authorization.		Completed

ID 49	**I want to be able to reset my account password so that I can regain access if I forget my account credentials.**	Completed
Feature Type: User Authentication | **Priority:** Should		
Requisite: ID #48 | **Module:** Login Page		
Platform scope: Commuter Web and Commuter Android App		
Web implementation: Provide email-code password recovery with attempt limits and new-password validation.		
Mobile implementation: Build native recovery/code/new-password screens against the same backend policy without exposing account credentials.		
Acceptance Criteria (Functional Requirements):		
1. The commuter shall be able to click on the "Forgot Password" option on the login page.		Completed
2. The commuter shall enter their registered email address to receive a reset code.		Completed
3. The commuter shall enter the code to set a new password.		Completed
4. The system shall limit the number of attempts to enter the code.		Completed
5. Once the password is reset, the commuter shall be able to log in using the new password.		Completed
6. The same reset policy shall apply to native screens without bypassing email-code verification or attempt limits.		Completed

ID 50	**I want to see the live location of jeepneys on the map so that I know when a unit is coming.**	Completed
Feature Type: Ride Tracking | **Priority:** Must		
Requisite: ID #48 | **Module:** Commuter Dashboard		
Platform scope: Commuter Web and Commuter Android App		
Web implementation: Display permitted commuter location and fresh eligible unit positions on the web map.		
Mobile implementation: Request native location permission and render the same server-published route and eligible unit locations with freshness handling.		
Acceptance Criteria (Functional Requirements):		
1. The client shall display the commuter permitted location or an actionable unavailable-location state.		Completed
2. The map shall display fresh, eligible on-shift units using the published route and intended operational visibility rules.		Completed
3. Unit positions shall refresh when valid location updates arrive; previous-shift coordinates shall not appear as current.		Completed

ID 51	**I want to signal a nearby jeepney to pick me up so that the conductor knows I am waiting.**	Completed
Feature Type: Pick Me Up | **Priority:** Must		
Requisite: ID #50 | **Module:** Commuter Dashboard		
Platform scope: Commuter Web and Commuter Android App		
Web implementation: Create and track an eligible nearby Pick Me Up request and show accept/reject/expiry.		
Mobile implementation: Build native hail actions, recover/revalidate the server request and handle cancellation, reconnect and expiry states.		
Acceptance Criteria (Functional Requirements):		
1. The commuter shall be able to send a Pick Me Up request to units within 1 kilometer.		Completed
2. The system shall prevent requests to units farther than 1 kilometer.		Completed
3. The system shall show the commuter whether the request was accepted, rejected, or expired.		Completed
4. The request shall expire after 3 minutes without a response.		Completed
5. Mobile request state shall revalidate after reconnect/restart instead of relying only on a local timer.		Completed

ID 52	**I want to update my profile and change my password so that my account details stay accurate and secure.**	Completed
Feature Type: Profile Management | **Priority:** Should		
Requisite: ID #48 | **Module:** Profile		
Platform scope: Commuter Web and Commuter Android App		
Web implementation: Provide profile/contact editing, photo upload and email-code-confirmed password changes.		
Mobile implementation: Provide native profile/photo selection, backend image upload and password-code screens; the saved account data is shared with web.		
Acceptance Criteria (Functional Requirements):		
1. The commuter shall be able to view their profile and update permitted contact details without editing verified identity fields.		Completed
2. The commuter shall be able to select and upload a JPG, PNG or WebP profile photo up to 3 MB, stored separately from private identity documents.		Completed
3. The saved photo shall remain visible after refresh/restart and be available to the same account on web and mobile.		Completed
4. Password changes shall validate the current/new password and require the verification code sent to the registered email.		Completed

Sprint 11: Commuter Payment and Rewards Activities

Schedule: June 21 - July 22 | **Status:** Completed

Provide the commuter payment, history and reward workflows on web and mobile. GCash refers to the existing sandbox/simulation flow; backend payment state, rather than a client success flag, establishes completion.

Table 2.11. Sprint 11: Commuter Payment and Rewards Activities

ID 53	**I want to pay my fare through GCash so that I do not need to carry cash.**	Completed
Feature Type: Fare Payment | **Priority:** Must		
Requisite: ID #40, #48 | **Module:** Payment		
Platform scope: Commuter Web and Commuter Android App		
Web implementation: Scan/open the conductor payment QR and complete the configured sandbox/simulation payment workflow.		
Mobile implementation: Use the native scanner and supported checkout/deep-link return, then re-fetch backend payment status instead of trusting a local success flag.		
Acceptance Criteria (Functional Requirements):		
1. The commuter shall be able to scan/open the payment QR generated by the conductor.		Completed
2. The client shall present the configured GCash sandbox/simulation checkout and supported return flow.		Completed
3. The backend shall establish payment completion and expose the same status to conductor and commuter clients.		Completed
4. The commuter shall be able to cancel an eligible pending payment; retries shall not create competing duplicate payments.		Completed

ID 54	**I want to view my payment history so that I can keep track of my fares.**	Completed
Feature Type: Fare Payment | **Priority:** Must		
Requisite: ID #53 | **Module:** Payment History		
Platform scope: Commuter Web and Commuter Android App		
Web implementation: Display paginated payment history and authoritative receipt details.		
Mobile implementation: Build native history/receipt views with refresh, pagination and the same transaction/group references.		
Acceptance Criteria (Functional Requirements):		
1. The commuter shall be able to view a list of past fare payments.		Completed
2. Each payment shall show its date, amount, payment method, and status.		Completed
3. History and receipt views shall use the same server transaction identity, amounts and payment state on both platforms.		Completed

ID 55	**I want to earn rewards for riding regularly so that I can get discounts or free rides.**	Completed
Feature Type: Rewards | **Priority:** Should		
Requisite: ID #28, #53 | **Module:** Rewards		
Platform scope: Commuter Web and Commuter Android App		
Web implementation: Display backend-calculated ride progress and available/used/expired vouchers.		
Mobile implementation: Display the same progress and vouchers on mobile; only an eligible identified payer receives the qualifying ride reward.		
Acceptance Criteria (Functional Requirements):		
1. The backend shall track qualifying ride progress under the saved reward policy.		Completed
2. The system shall issue a reward voucher when the qualifying threshold is reached without awarding the same ride twice.		Completed
3. For an identified payer with companions, only the eligible registered payer shall receive the ride reward unless other commuters are separately identified and eligible.		Completed
4. The commuter shall be able to view the same available, used and expired vouchers on web and mobile.		Completed

ID 56	**I want my cash rides to count toward rewards so that I am not left out when paying in cash.**	Completed
Feature Type: Rewards | **Priority:** Could		
Requisite: ID #55 | **Module:** Rewards		
Platform scope: Commuter Web and Commuter Android App		
Web implementation: Claim an eligible cash receipt through scanning/manual entry with ownership and duplicate checks.		
Mobile implementation: Use native receipt scanning/manual entry and refresh shared rewards only after successful backend claim.		
Acceptance Criteria (Functional Requirements):		
1. The commuter shall be able to claim a paper cash receipt toward the reward cycle.		Completed
2. The system shall prevent a receipt from being claimed more than once.		Completed
3. A receipt claimed on either platform shall not earn a second reward when retried from the other platform.		Completed

Sprint 12: Commuter Safety and Support Activities

Schedule: June 28 - July 15 | **Status:** Completed

Provide SOS, ride sharing, lost-and-found, feedback and service updates on Commuter Web and Commuter Mobile. Mobile permissions and native interactions are implemented separately while sharing backend records.

Table 2.12. Sprint 12: Commuter Safety and Support Activities

ID 57	**I want to send an SOS alert so that I can get help immediately when I am in danger.**	Completed
Feature Type: Safety | **Priority:** Must		
Requisite: ID #48 | **Module:** Commuter Dashboard		
Platform scope: Commuter Web and Commuter Android App		
Web implementation: Send an authenticated SOS with permitted, sufficiently fresh commuter coordinates.		
Mobile implementation: Build native SOS confirmation and location handling; do not substitute fabricated coordinates when GPS fails.		
Acceptance Criteria (Functional Requirements):		
1. The commuter shall be able to trigger an SOS alert from the dashboard.		Completed
2. The system shall send the commuter's location with the alert.		Completed
3. The administrator shall receive the alert immediately.		Completed
4. Mobile SOS shall handle location denial/unavailability explicitly and send no fabricated coordinates.		Completed

ID 58	**I want to share my live location so that my family or friends can follow my ride.**	Completed
Feature Type: Safety | **Priority:** Must		
Requisite: ID #48 | **Module:** Share Ride		
Platform scope: Commuter Web and Commuter Android App		
Web implementation: Create and display a supported public ride-sharing link and update location while sharing is active.		
Mobile implementation: Create the same valid sharing link, use the native share sheet and maintain/stop supported location updates according to permissions.		
Acceptance Criteria (Functional Requirements):		
1. The commuter shall be able to generate a link to share their live location.		Completed
2. Anyone with the link shall be able to view the commuter's location on a live map without an account.		Completed
3. The shared location shall update while sharing is active.		Completed
4. Mobile sharing shall produce a valid viewer link and stop or explain location updates when sharing/permissions end.		Completed

ID 59	**I want to search for and claim items I lost in a jeepney so that I can get them back.**	Completed
Feature Type: Lost and Found | **Priority:** Must		
Requisite: ID #24, #48 | **Module:** Lost and Found		
Platform scope: Commuter Web and Commuter Android App		
Web implementation: Provide item search, account-owned claim submission/status and watchlist controls.		
Mobile implementation: Build native found-item/claim/watchlist screens using the same records, filters, statuses and backend authorization.		
Acceptance Criteria (Functional Requirements):		
1. The commuter shall be able to view and search the found items.		Completed
2. The commuter shall be able to submit a claim for an item.		Completed
3. The commuter shall be able to track the status of their claims.		Completed
4. The commuter shall be able to add items to a watchlist.		Completed
5. Native claims and watchlist changes shall use account ownership checks and the same authoritative item statuses.		Completed

ID 60	**I want to rate the driver and the conductor so that the operator knows the quality of their service.**	Completed
Feature Type: Feedback | **Priority:** Should		
Requisite: ID #15, #48 | **Module:** Feedback		
Platform scope: Commuter Web and Commuter Android App		
Web implementation: Provide eligible-ride QR/history feedback and separate conductor/driver ratings.		
Mobile implementation: Build native scanning/history entry and submit separate crew ratings for the correct paid ride and shift.		
Acceptance Criteria (Functional Requirements):		
1. The commuter shall be able to enter feedback through supported QR scanning or their eligible ride history.		Completed
2. The backend shall verify ride ownership/eligibility and prevent duplicate feedback for the same allowed target.		Completed
3. The commuter shall be able to rate the driver and conductor separately for the correct transaction/shift.		Completed

ID 61	**I want to read announcements so that I am informed of service updates.**	Completed
Feature Type: Announcements | **Priority:** Should		
Requisite: ID #26, #48 | **Module:** Updates		
Platform scope: Commuter Web and Commuter Android App		
Web implementation: Display audience-appropriate updates and mark account-owned announcements read.		
Mobile implementation: Build native announcement list/detail/read interactions and refresh on foreground or reconnect.		
Acceptance Criteria (Functional Requirements):		
1. The commuter shall be able to view the announcements posted by the administrator.		Completed
2. The system shall mark announcements that the commuter has not read yet.		Completed
3. Audience visibility and account-level read/unread state shall remain consistent across web and mobile.		Completed

Sprint 13: Fare Discount Applications

Schedule: October 12 - 16 | **Status:** Completed

Allow commuters to apply for discounts and renew Student eligibility from web or mobile. Supporting documents remain private, and approval, correction and rejection are handled in Administrator Web.

Table 2.13. Sprint 13: Fare Discount Applications

ID 62	**I want to apply for a fare discount so that I can pay the discounted fare as a student, senior citizen, or PWD.**	Completed
Feature Type: Discount Management | **Priority:** Must		
Requisite: ID #23, #48 | **Module:** Discount Application		
Platform scope: Commuter Web and Commuter Android App		
Web implementation: Provide discount-category selection, private proof upload, correction/cancellation and status display.		
Mobile implementation: Build native document selection and mobile application submission using the same validation, revision and review state.		
Acceptance Criteria (Functional Requirements):		
1. The eligible commuter shall be able to select Student, Senior Citizen or PWD and upload a private supporting document in the production workflow.		Completed
2. The commuter shall be able to view application status and respond to a correction request with the current revision.		Completed
3. The commuter shall be able to cancel an eligible outstanding application.		Completed
4. Only backend-confirmed Admin approval shall change the effective discount; client state alone shall not authorize a discounted fare.		Completed

ID 63	**I want to renew my student discount every school year so that I can keep paying the student fare.**	Completed
Feature Type: Discount Management | **Priority:** Should		
Requisite: ID #62 | **Module:** Student Renewal		
Platform scope: Commuter Web and Commuter Android App		
Web implementation: Provide renewal reminders, enrollment-proof submission/correction and voluntary Regular conversion.		
Mobile implementation: Build native renewal fields/document picker and reminder actions against the same annual cycle, deadline and backend eligibility.		
Acceptance Criteria (Functional Requirements):		
1. The system shall remind eligible students before the configured annual cutoff using Asia/Manila business time.		Completed
2. The student shall be able to upload current enrollment proof and school details from web or mobile.		Completed
3. The student shall be able to submit corrected renewal proof within the supplied correction deadline or voluntarily switch to Regular.		Completed
4. Approval shall renew the discount to the next applicable cutoff; after expiry, Regular fares apply while review remains pending under the current policy.		Completed
5. Late or rejected renewal shall not delete the commuter account or historical ride records.		Completed

ID 64	**I want to review discount applications so that only eligible commuters receive discounted fares.**	Completed
Feature Type: Discount Management | **Priority:** Must		
Requisite: ID #1, #62 | **Module:** User Management		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Review the shared discount application queue, privately open proof and record approve/correct/reject decisions.		
Mobile integration: No Admin mobile app. Commuter Mobile displays the review outcome and server-updated fare eligibility for its own account.		
Acceptance Criteria (Functional Requirements):		
1. Administrator Web shall list discount applications pending review from either commuter client.		Completed
2. The administrator shall be able to open the supporting document through an authorized private link.		Completed
3. The administrator shall be able to approve, request correction or reject the current application revision.		Completed
4. The system shall notify the account and expose the same review result and effective fare eligibility on web and mobile.		Completed

ID 65	**I want to review student renewals so that student discounts stay limited to currently enrolled students.**	Completed
Feature Type: Discount Management | **Priority:** Must		
Requisite: ID #1, #63 | **Module:** User Management		
Platform scope: Administrator Web; shared mobile integration only (no Admin mobile app)		
Web implementation: Review student renewals, view private enrollment proof and record a revision-safe review outcome.		
Mobile integration: No Admin mobile app. Commuter Mobile displays renewal outcomes, correction deadlines and the current effective fare type.		
Acceptance Criteria (Functional Requirements):		
1. Administrator Web shall list student renewals pending review from either commuter client.		Completed
2. The administrator shall be able to open private enrollment proof.		Completed
3. The administrator shall be able to approve, request correction or reject a renewal without processing a stale revision twice.		Completed
4. The review result, renewal expiry and any correction deadline shall be visible to the corresponding commuter account on both platforms.		Completed
