

Activity Log & Notification Suggestions

CHATCO Admin Panel · Gap analysis and recommended additions · September 2026

1. Summary

The admin panel has two related systems. **Notifications** pop up in the admin bell for events that need attention now. The **Activity Log** is the permanent audit trail of what happened and who did it. The intended rule is:

Important events notify the admin AND are recorded in the Activity Log. Routine admin actions (edits, configuration changes) are recorded in the Activity Log only and never pop up as notifications.

Reviewing the current system against that rule found three kinds of gaps:

- **Missing notifications** for events that need an admin to act (for example, a Lost & Found claim or a remittance waiting for a cash count).
- **Admin actions not being logged**, most importantly the admin's cash declaration on a remittance.
- **Notification events never reach the Activity Log.** Today the log records admin actions only, so an SOS, a new registration or an automatically ended shift leaves no entry in the audit trail.

2. What exists today

Notifications sent to admins

Notification	Triggered when	Opens
New registration	A commuter signs up and is waiting for verification	User Management
Emergency SOS	A commuter or conductor triggers SOS	Monitoring
Overspeeding flagged	A unit goes over the speed limit (once per episode)	Monitoring
Shift started	A conductor starts a shift on a unit	Fleet Management
Remittance completed	A shift's remittance is settled (full, short or over)	Remittance

Activity Log coverage

About 49 admin actions across 13 categories are logged: Members, Personnel, Vehicles, Routes, Fare Points, Settings, Vouchers, Remittance Options, FAQs, Announcements, Lost & Found, SOS (acknowledge / resolve) and Shift Device recovery. Almost every admin create, edit and delete is covered. Every entry is written from an admin action, which is why system and conductor/commuter events are never recorded.

3. Add: notify the admin AND record in the Activity Log

These events need an admin to act, so they belong in both places.

Event	Current behaviour	Why it matters	Priority
Lost & Found claim submitted by a commuter	No admin notification; admins only see it by opening Lost & Found	The claim needs admin review and the claimant is waiting	High

Event	Current behaviour	Why it matters	Priority
Remittance waiting for cash count	No notification. The only remittance notice fires after it is settled	Money that needs an admin to act; the one remittance state nobody is told about	High
Remittance overdue (past the grace period)	The reminder goes to the conductor only	The admin cannot follow up on something they don't know about	High
Shift ended automatically (max hours or midnight sweep)	Silent	Usually means a conductor forgot to end the shift, or a device died	Medium
Remittance short	Hidden inside the generic "Remittance completed ... with a shortage" message	A shortage should stand out with its own title	Medium
Unit stopped reporting location (10+ min, on shift)	Only visible while Monitoring is open	Possible safety issue. Notify once per silent spell, like overspeeding	Medium
Low rating or complaint from a commuter	Nothing	Service-quality issue. Optional, with a star threshold the admin sets (e.g. 2 stars or fewer)	Low

4. Add: record in the Activity Log only (no notification)

These are admin or system actions worth keeping in the audit trail but not worth interrupting anyone for.

Action	Current behaviour	Notes	Priority
Admin records a cash declaration on a remittance	Not logged	A financial decision that settles the remittance as complete, short or over, with no record of who did it. Needs a new "Remittance" category	High
System events: SOS triggered, new registration received, shift auto-ended, lost items auto-expired	Not logged; the log only accepts admin actions	Show "System", or the conductor/commuter involved, as the actor	High
Admin sign-in, sign-out, failed sign-in, password reset	Not logged	Security audit. Admins can only be signed in on one device at a time, so "signed in and ended the session on another device" is useful to record	Medium
Driver license image uploaded or deleted	Not logged	It is an identity document	Medium
Lost & Found photo added or deleted	Not logged	Minor, but completes the Lost & Found trail	Low

5. Keep out of the Activity Log

Recording these would bury the entries that matter:

- **Shift started** and **overspeeding**: high-volume, and each already has its own full history (Shift History and Overspeeding History). The notification is enough.
- **Payment expiry, commuter hails, conductor break and capacity changes**: routine operational noise.
- **Settings, FAQ, voucher, route and other configuration edits** stay log-only, as they are today. That part of the current split is already correct.

6. What it takes to build

- **New notifications** reuse the existing admin-notification function. Each is one call placed right after the database change is saved, the same way the current five work. No new tables.
- **System events in the Activity Log:** the logging function already accepts an entry without an admin. The Activity Log page only needs to show "System" (or the conductor/commuter) as the actor.
- **New categories** (Remittance, Shift, and possibly Registration) are added to the backend category list and the page's filter dropdown. No database migration is needed because the category is stored as text.
- **Notification noise:** events that can repeat (location silence, low ratings) should fire once per episode rather than on every update, following how overspeeding already works.

7. Suggested order

Phase	Items	Reason
1	Log cash declarations; notify on remittances waiting for a cash count or overdue; notify on new Lost & Found claims	Money and people waiting on an admin
2	Log system events (SOS triggered, registration received, shift auto-ended); separate "Remittance short" notification; notify on auto-ended shifts	Completes the rule that important notifications are also in the log
3	Admin sign-in / security logging; unit-location-silence notification; license image logging	Security and safety hardening
4	Low-rating notification; Lost & Found photo logging	Nice to have
